PORTÁRA

SLIDING CONSTRUCTION GATE

The CE-certified automated or manually operated sliding construction gate. Installed in the blink of an eye.

PORTÁRA

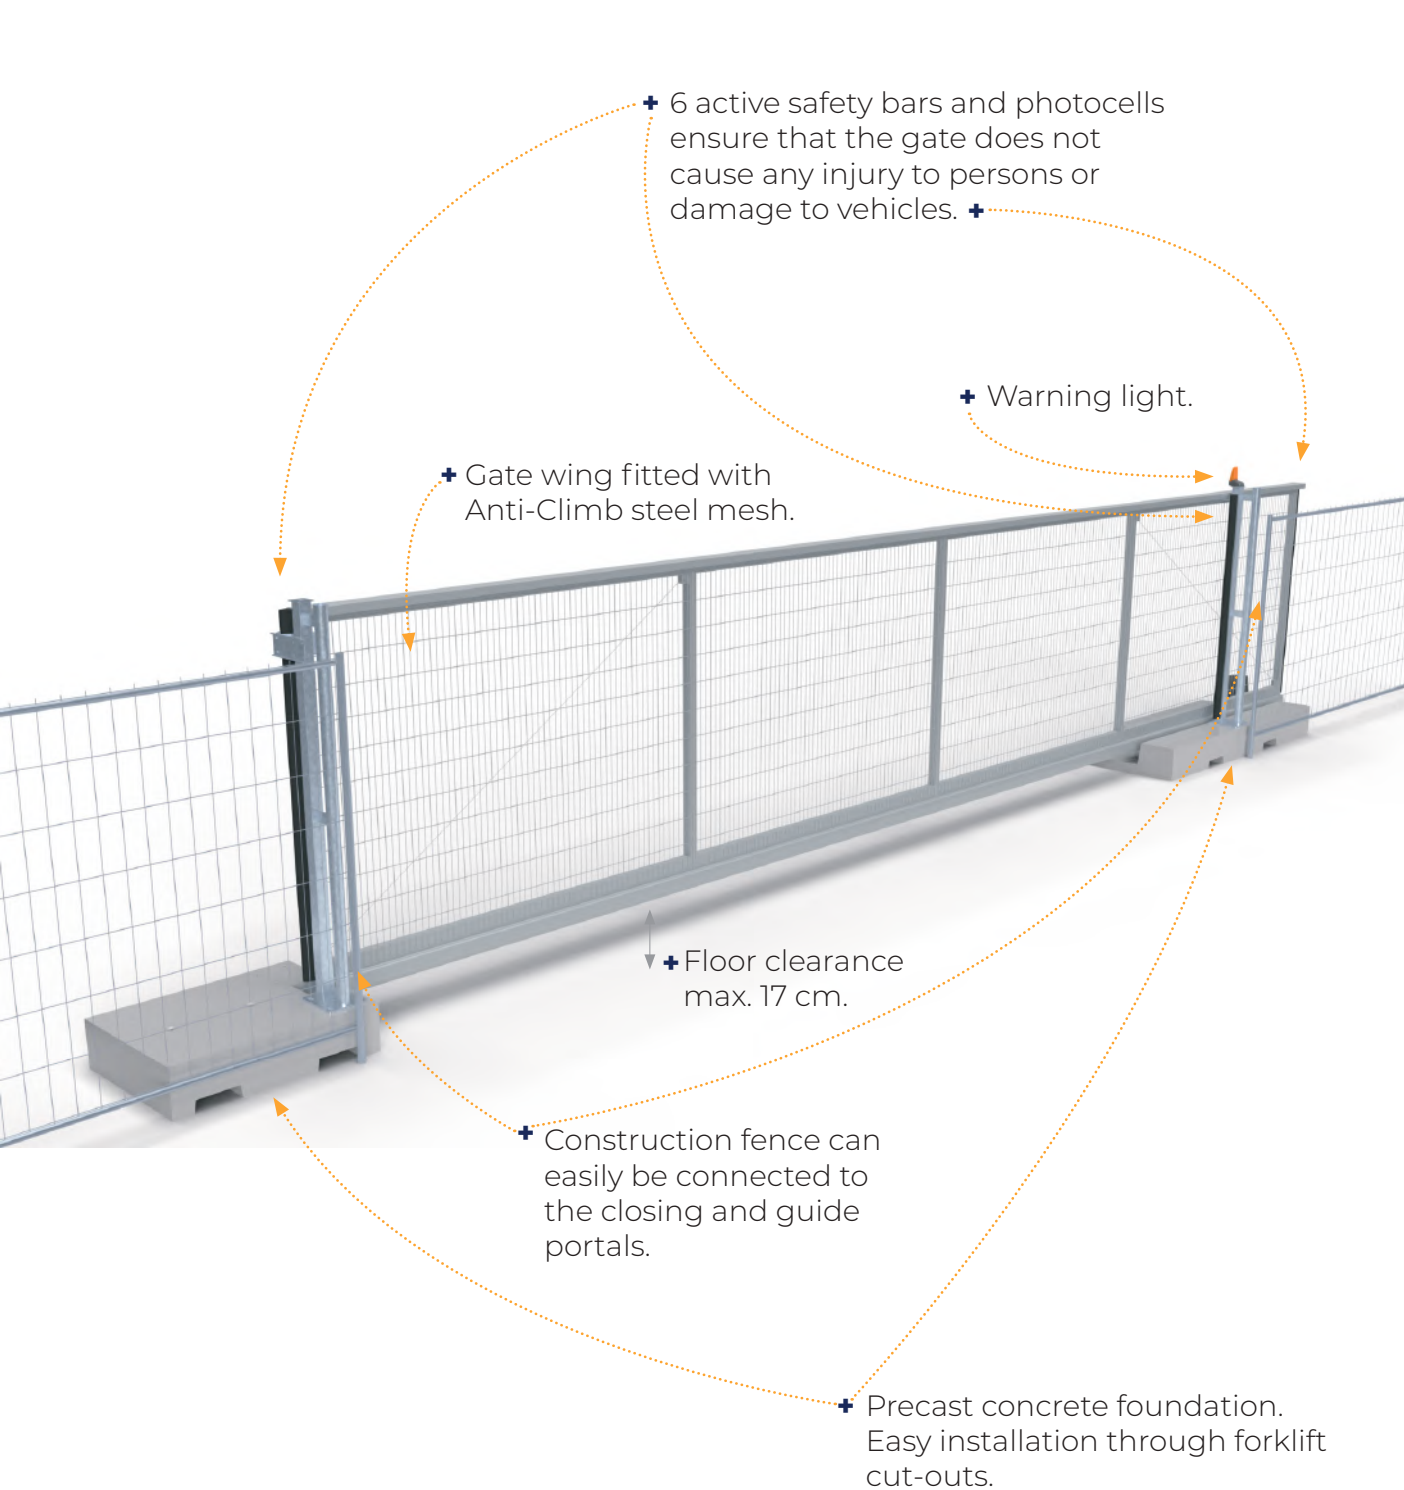

SLIDING CONSTRUCTION GATE

PLUG 'N PLAY

The Portára aluminium sliding construction gate is very suitable as a temporary access gate for your building site or other properties. The Portára consists of a high-quality aluminium gate wing with sturdy steel mesh. The gate can be installed to slide to the left or right. The sliding gate pairs seamlessly with our construction fences, but can also be used with bar mesh fencing or wire mesh fencing.

This sliding gate is supplied fully Plug 'n Play. Thanks to its prefabricated foundation with forklift cut-outs, the gate can be installed in no-time and is immediately ready for use. Is the sliding gate no longer needed at your current project? Dismantling it is a piece of cake. This makes the Portára truly multi-purpose for your projects.

AUTOMATED PORTÁRA

Internal toothed bar guide wheels in combination with a powerful Cardin operator make the gate run smoothly.

The gate is supplied with a remote control. The operator is equipped with an emergency power battery. This battery ensures that the gate can still be operated several times during a power cut.

MANUALLY OPERATED PORTÁRA

Do you prefer a Portára without an operator, photocells and safety strips? We also provide custom options. For this gate, no power supply is required. A solid lock ensures the gate closes properly.

STANDARD SIZES

The Portára is available with a standard set-up height of approximately 2 metres. The standard passage is 5 metres, 6 metres or approx. 7 metres wide. Need a wider passage? The two wings allow you to create a passage of up to 14 metres wide!

Dimensions passage

5 metres
6 metres
6,75 metres

Required site length

13,37 metres
14,81 metres
17,15 metres

WIRELESS

The photocells are wireless. In addition, the two safety edges at the head of the gate are equipped with a wireless transmission system. This allows for the photocells and strips to easily and quickly be removed for service and maintenance.

The photocells are concealed in the design. Not only safe but also vandalism-proof!

Wireless transmission system

Vandalism-proof

ADDITIONAL OPTIONS

Do you prefer a different colour? No problem! Do you need more protection against people climbing the fence? The Portára is available with pointed tips. We also offer an additional GSM module with our gates. This will allow you to control the gate from anywhere in the world!

OPTIMAL PERSONAL AND VEHICLE SECURITY

An electrically operated sliding gate is a machine. To prevent people and vehicles from getting stuck, the gate is equipped with photocells and safety strips.

The Portára electronic sliding construction gate is equipped with person and vehicle protection. The photocells check whether the passage is free and the safety strips ensure that the operator stops immediately at the slightest touch.

No trapping hazard

Stops and/or reverses immediately
